

OBSERVATION & SUPERVISION DAY COURSE

You'll have the unique opportunity to shadow Amar, in a non-surgical aesthetics clinic, and experience a typical day in his practice. Throughout the day, you'll observe how he interacts with patients, conducts consultations, and performs various non-surgical aesthetic treatments. This hands-on experience will allow you to learn and understand his techniques better, and you'll have the chance to ask questions to deepen your knowledge.

During the half-day injecting session with one of the academy's qualified trainers, you'll be given the chance to perform foundation-level treatments on model(s) under the careful supervision of the trainer(s). To enhance your learning experience and ensure continuity of care, you're requested to bring your own model(s) for the injecting session. This will allow you to review your work and establish a relationship with your patient(s) as you progress in your practical skills.

COURSE TOPICS

- Understand the consultation process and patient assessment, handling various skin types, concerns, and medical history.
- Build confidence in a clinical setting.
- Observe a diverse range of basic and advanced injection techniques.
- Learn the art of optimal product selection for different treatments.
- Master patient aftercare protocols for successful outcomes.
- Acquire knowledge about systems, paperwork, and data collection, including before and after photographs, for efficient and secure record-keeping.
- Develop skills in managing difficult patients and knowing when to refuse treatment.
- Opportunity to network and connect with like-minded professionals in the industry.

KEY INFORMATION

- You will join and have access to our private online community for support and guidance.
- You will be requested to bring your own model(s) for the injecting session.
